

WSC

Water Supply Controller

Water Source to Reservoir Pressure in Single Controller

Northwest Tech-Con System's model WSC panels is designed to transfer water from a source to the reservoir. Well pumps start automatically upon level demand signal from the reservoir. The distribution pressure pump is governed primarily by a pressure transducer. The clean design allows the user to quickly identify problems to ensure quick troubleshooting and maintenance.

FEATURES:

- Programmable controller
- Data Terminal and Display Interface
- LED graphic display
- Field programmable functions and setpoints
- True motor fail alarm
- Control via floats, ultrasonic or pressure transducers
- Optional Variable Frequency Drive
- Optional Ultrasonic Level Sensor or Pressure Transducer
- Custom Design to meet your needs
